THE INTERNET

- The **Internet** is a network connecting millions of computer users worldwide.
- The **World Wide Web** is a huge portion of the Internet containing linked documents, called **pages.**
- With a **broadband** connection the **access** to the Internet is fast.
- With a wi-fi connection one can **access** the Internet through a **wireless network**, without needing a **cable** of any kind.

THE INTERNET

Getting started on the Internet

- To go **on the Internet**, you need an **ISP** (Internet service provider) that will **connect** your computer to the Internet and give you **access to** email and other services.
- When you **browse**, you look for information on the Internet. The software that helps you do this can be called a **browser**.

THE INTERNET

- You use a **search engine** to help you locate what you want. Google is one of the best known search engines and people now talk about **googling** someone or something.
- A website is a document on the Web giving information about a particular subject.
- The introductory page is called the **home page**.

THE INTERNET

- Many **websites** also have **links**: if you **click on** a link, it will take you to a different website, or move you from one part of the website to another.
- Good websites are easy to **navigate.** You can **bookmark** websites that you **log on** to frequently.
- If a website gets a lot of **hits**, it means that it has been visited by many people.

THE INTERNET

- Sometimes you need to **subscribe to** a site.
- You need to have a special **username** and a **password**.
- You will be able to **log in** to the site if you enter this information correctly.
- You can **store** your data on your computer or phone, or you can store in the **cloud**.

THE INTERNET

Using the Internet

- Students **search** the Internet to help with their studies.
- People **download** information, pictures, music, video clips, etc.
- People buy goods and services. They go to a website, select the **item** they want and click **add to basket / bag**. When they have finished shopping they go to **checkout** and pay for their items, usually with a credit card.

THE INTERNET

- Some people have a personal website to provide news about a particular subject, or just write about events in their life. These are called **blogs**, and people who write them are **bloggers**.
- Some people just like to spend hours **surfing the web or** on **social networking sites**. On these sites people **post** comments to their friends.
- Some people do a lot of **instant messaging**.

THE INTERNET

Emails

How to read an email address?

e.g. thompson@gmail.com

Thompson **at** gmail **dot** com.

THANK YOU FOR YOUR ATTENTION!

EMAILS

Read the following text.

Some tips for effective use of email

- Spend less time **on checking your email** at work, don't spend half of your day online refreshing the **inbox** page. This habit may interfere with your ability **to respond** to email more effectively. Set specific times for checking your email.
- Clear your mailbox regularly. **Delete** old messages.
- Use simple language, avoid using technical terms when writing email messages. For your email to be effective, the **recipient** should spend as little time as possible understanding the message.
- To send multiple files via email, you can **attach** the documents. Attaching documents takes time and some files may be larger than others, therefore, it is better **to save** the documents on a cloud platform and share the link through email.
- Write the main message first before you type the recipient's email address. Then, **proofread** the email and correct all errors. Once you're satisfied with the work, add the recipient's address and click send.
- If a message can be better **conveyed** through face-to-face communication, consider talking to the recipient.

© **Università degli Studi eCampus** - Via Isimbardi 10 - 22060 Novedrate (Co) - C.F. 9002752130 - Tel: 031.79421 - Fax: 031.7942501 - Mail: info@uniecampus.it

- Respect the privacy of the recipients. Use the **carbon copies** (cc) or **blind carbon copies** (bcc) feature when sending an email to multiple people. The difference between cc and bcc is the latter hides a recipient's email address from the other recipients while the former makes the address visible to everyone.

- Get to the point. The attention span of internet users is short because they want to open a page, **skim** it, and move on to their next task. Hence, if you send an email that's too long, the recipient may lose interest in the message.

- Before **forwarding an email**, consider scanning it for viruses. Review the email and its attachments.

- Sometimes you may not be able to send the reply right away. You should **acknowledge** receipt of email to prevent any confusion for your sender. Send a message that you've received the email and will reply when you are able.

- When you write a formal email, add an email **signature**, let the recipient know who you are and by which methods you are available for contact. Include your title, company and contact information.
