MEDICINE AND TECHNOLOGY

Medical technology has made rapid advances in recent **decades**. Nowadays, a vast range of **devices** is available: people with hearing difficulties wear **hearing aids;** people with heart problems wear tiny **pacemakers.**

Artificial hips and knees are highly efficient. People who have lost an arm or a leg can have a **prosthetic** leg or a modern **robotic** arm and hand, which they can use to pick things up. **3D printing** can be used in **reproducing bones or other organs** in the human body. This advance in technology is also pushing into prosthetics. Eyesight problems can be corrected by **laser surgery**.

Keyhole surgery is also getting more common, which reduces the necessity to cut open a person's body to operate on them. **Scanners**, which can identify health problems at an early stage, will also become more sophisticated in the future.
Data is also very important in the healthcare industry. It ranges from analysing diagnostic reports to filing patient treatment histories. **Healthcare facilities** have an overwhelming amount of information for storage, and they help **physicians** make more accurate **diagnoses** and recommend **treatments**.

Mobile apps are available in the healthcare sector, too. Doctors and patients are discovering new ways to use technology **to monitor** personal health. Nowadays, tracking daily **sleep patterns**, counting **calories**, and even monitoring **heart rate** is possible. Digital innovations are **revolutionizing** healthcare. Multiple medical issues can be researched and solved with these remarkable new technologies.
