Just Walk Out Technology – Audioscript 2

Amazon Go is a new kind of store, featuring the world's most advanced shopping technology.
The first Amazon Go store opened in Manhattan, New York. What's so special about it, is that it's a *cashierless* grocery store. It's a checkout-free shopping experience.

Let's check out some facts. Before even going to an Amazon Go, you need an Amazon account: you create an account and you download the Amazon Go App.
When you walk into the store, you need to scan your QR code at the entrance gate, and once you're in, you don't need your phone anymore. And you just browse and shop, like you would in any other store.
You can grab whatever you want, and if you have second thoughts you can put the food back onto the shelf without being charged. This is possible because there is a type of technology that is used here called *Just Walk Out Technology*, which detects the products that you put in your virtual cart. Virtual meaning your bag, your backpack, your tote, etc.

Once you've got everything you want, you can just go, and the App adds up your virtual cart and charges your Amazon account. Your receipt is sent straight to the App, and you can keep going. Just walk out of the shop. No lines. No check-out. And all this thanks to the *Just Walk Out Technology*, a *Computer Vision* technology which is being used in other sectors.

Looking back at this kind of shopping, the benefit for the company is that there is no possibility of shoplifting, while for the consumer the main benefit is that you don't have to wait on line!

Once you're done, you're good to go. No more lines, no more checkouts!
