Weather_7.3

Listen to Audio 2. Match each given word/phrase 1-10 from the radio interview with a definition A-J.

1. Meteorology	A an expert in Physics
2. Branch	B put myself forward as a candidate
3. Applied for	C fully trusts
4. Besides	D transmitted by television
5. Broadcast	E most important
6. Physicist	F in addition to
7. Assume	G a short news programme
8. Bulletin	H a subdivision of something
9. Chief	I suppose
10. Rely on	J the study of the weather conditions

Interview With a Weather Forecaster – Audioscript 2

Today we are talking to a popular TV face, Elizabeth Davis. Every day, millions of us watch and listen to Elizabeth telling us what the weather will be like in the following days.

Q. Elizabeth, the exact noun for you job is "meteorologist" isn't it? How did you start this job?
A. Good morning! … That's correct. I started studying meteorology about ten years ago, when I was a Physics student at university. I think I've always been interested in the weather and in the possibility of predicting its changes.

Q. Not a typical interest for a teenage girl, is it?
A. Well not particularly, I guess, but I've always been fascinated by what is behind natural phenomena, and as I child I started asking myself "why"?

Q. So you were studying Physics …
A. Right, I was undecided about the specialisation, as I said I'm curious and I couldn't choose a specific branch of science… I wanted to look into everything! Then I attended a seminar on meteorology and I decided! After the degree and the specialisation, I applied for a post at MYZ TV. They were looking for new faces for the weather forecast, they hired me and … Here I am!

07. Listening 2 Script

Q. What is the typical day of a meteorologist-TV star like?
A. I work five-six days a week, eight-nine hours a day. Besides the TV programme, which is broadcast live, I work with the department of meteorology of my university, for which I organise and take part in workshops on a regular basis. I'm not a TV star… But it's true that people recognise me in the street! Sometimes they ask for an autograph or they smile and ask me what the weather will be like the following weekend…

Q. Talking about your programme, you're a physicist so I assume you prepare what you will say, you don't just read and memorise your speech, do you?
A. Exactly. Actually I do not work alone, a team of scientists of the National Observatory of Meteorology cooperate to make the daily bulletin and the IT people create the maps and the animation. It's quite a big team work; we've been working together for five-six years and we get along very well.

Q. What qualities do you need in your job?
A. I think the chief quality is the desire to learn more and more, because the more prepared you are, the better. It is also important to be accurate, both in writing and orally and, at the same time, clear and comprehensible. You need to communicate to millions of people throughout the country, so you must find the right balance between scientific precision and the ability to make everybody understand you.

Q. What do you particularly like in your job?
A. The idea that a huge audience is listening to me when I speak and that people rely on me. I know that some people decide to put off their weekend trip, when I say that it is going to rain!
