Brain Food – Audioscript 1

Dr. Willams is a nutritionist who talks about a different kind of nourishment: mental nourishment. And gives us some *food for thought*. A lot of foods and substances can help our brains perform better, and each has different benefits. There are things, such as drinks with caffeine, or food like chocolate, that can help you focus. Something sugary might boost your memory, at least temporarily. The brain really likes sugar, which does have benefits. These so-called 'brain foods' have something in common, though: they help improve your memory or lengthen your attention span.

There has always been some debate about whether or not these foods can really make you smarter. There's no food that can make you smarter, but a good diet can help your brain work to its full potential.

It's not that brain foods can make you a more intelligent person, but they can help. Let's start with caffeine. It's considered a brain food because it helps you wake up, it sharpens your focus and, like all nourishment, the temporary effects of caffeine diminish over time. Coffee has got caffeine.

Furthermore, our brain reacts to sugar, it helps us focus. But it's not the sugar found in chocolate that we need, it's glucose. It's a sugar that the body makes from certain foods. A good source is fruit. The processed sugar found in a chocolate bar can help, but the energy it gives doesn't last long. It would be better to avoid eating too much, because the temporary good effects aren't worth the long-term bad effects on the body. But if you like chocolate, dark chocolate is more recommendable: it's healthier than processed milk chocolate. And with nuts! It gives your brain nourishment, without turning into fat.

Fish has a positive impact, because it has a more permanent or long lasting effect. It provides good fats that nourish the brain and the heart. Brain food is best in the morning at breakfast, when you wake up after a long sleep.
Whole grains, dairy and fruits are good brain foods for breakfast. Blueberries are a popular breakfast food and they have been proven to increase learning capacity and motor skills.

Have a healthy breakfast! Bye!
