Doing Sports: Is It Healthy, Or Not? – Audioscript 2

Every day we hear that sport is good and fun: radio, TV, advertisements suggest that regular physical exercise, sports in general and even competitions, are beneficial for our health.

Some even claim that sports are good at any age, in fact age should not be taken into account, as our approach to sport must be chiefly "mental". Is this really true? As it is often the case, when a concept gets very popular, some myths grow around it and we tend to make generalisations. Let's see some general facts about sports which are widely accepted by science (and by good sense).

Firstly, "you can do any sport at any age" is not completely true: a very important thing when you decide to do sport, is that the activity you choose must take a range of factors into account, including age, overall fitness, lifestyle. A sedentary job is obviously different, compared to one that requires a lot of movement and physical activity.

Also - and this comes in consequence of the first consideration - you must set specific, sensible aims and act accordingly. Do you want to lose weight? Do you intend to become another Schwarzenegger? Do you simply want to get fit, and stay that way? Then different activities and different paces are recommended. For example, if you are overweight and want to lose weight, you won't achieve your aim unless you plan some aerobic activities.

Furthermore, remember the importance of a nutritious diet. Food habits are extremely important in our life, and in sports too. A balanced diet, rich in vegetables and fruit is recommended and, although we are regularly bombarded with new "miracle diets", the best thing to do is ask an expert, that is your doctor.

Finally, resting between exercises, and stretching at the end of your workout, is also important. Do not overdo it! If you workout too hard, you will risk pulling a muscle or end up getting backache or other pains. The time devoted to stretching and resting also varies with age, lifestyle and type of workout, but in general it is of vital importance.

To sum up, sports and exercise are advantageous, and can be fun, if you do them properly. Moderate activity, correct movement-stretching-relaxation time-food balance, and good sense, are also strongly recommended.
